

History of «Kogon yog ekstraksiya zavodi»

The construction of an oil plant in the city of Kagan began at the end of the 19th century and in 1910 the production was put into operation. At that time, the plant operated 6 hydraulic presses, 2 roller machines, 4 units for separating the kernel from the husk, 18 linters and 8 gin machines. In 1915, the oil plant was run by a private entrepreneur, and every day 5-7 tons of cottonseed oil were produced, most of which was sent to Russia.

During the Second World War, the volume of production decreased. Therefore, the task was set for the technical re-equipment of the plant and the use of new advanced technologies. In 1956, the hydropress workshop was renovated, which made it possible to increase the production capacity of the plant by 1.5 times compared to the war years.

In 1968, a refining shop was built, in 1971 an extraction shop, and in 1972, meal storages. In 1983, three experiments were carried out on press equipment, including the press of the G-24 brand, which, after being tested at the Kagan MEP, began to be used at other plants in our Republic. In 1989, 2010, 2015, a major overhaul of all equipment was carried out at the plant and a warehouse was built that allows storing up to 11 thousand tons of cotton seeds.

In 1994, the Kagan oil extraction plant was re-registered as an open joint-stock company "Kogon yog extraction" and in the same year, a shop for the production of laundry soap was commissioned.

In 1999, as a result of cooperation with the French company "STEKA BOTTLES", a semi-automatic line for filling vegetable oil into PET bottles with a capacity of 1 liter was purchased at the plant. In 2005, a cottonseed oil deodorization line with a capacity of 15 tons per day was put into operation. In the same year, a new line of the boiler shop with a capacity of 25 tons per hour was put into operation.

In 2018, together with Chinese partners, the semi-automatic line was replaced with a modern automated line. The line is made by the Chinese manufacturer "Chan Power Machinery". Also in 2018, the company purchased and installed two Chinese-made rollers and vertical filters. Thus, at present, JSC "Kogon yog extraction" is a manufacturing enterprise, which, from the beginning of its development to the present day, has been constantly working to improve its technological and production base, the purpose of which is to constantly improve and optimize the productivity and efficiency of the enterprise.
